Martians Are On Their Way!

Nearly every major government has now confirmed the reports: We are not alone in the universe, and what's more, The Martians are on their way to Earth! Current estimates say that the Martian fleet, which consists of 7 large ships, will take roughly 29 days to reach Earth's orbit. Now everyone the world over asks the same question: Do they come in peace?

Global Defense Forces

With the Pacific Asian Alliance joining Turtle Island, Heart of Africa, and the Greater European Coalition in the new push for so called "Global Defense Forces" many are wondering if South America and Australia will be creating their own, or pushing to join a pre-established Defense Force. With Martians on the way, is there even time to debate?

Asteroids Change Trajectory

Three asteroids that the scientific community has been monitoring, have suddenly changed trajectory after emitting a never-before-seen level of radiation. The new trajectory could put them nerve-shakingly close to Earth's orbit, but top researchers have assured us that a collision cannot happen so your best bet is to sit back and enjoy the show!
